

Never Log Level Info Or More In Execution Path

There should be no "trivial" logs in the normal execution path (see [Logging in Python](#) and [EventLogger](#)).

Existing Log Levels are:

```
def severity_string(severity, mapping={
    -300: 'TRACE',
    -200: 'DEBUG',
    -100: 'BLATHER',
    0: 'INFO',
    100: 'PROBLEM',
    200: 'ERROR',
    300: 'PANIC',
}):
    """Convert a severity code to a string."""
    s = mapping.get(int(severity), "")
    return "%s(%s)" % (s, severity)
```
